Updated till Vol. 29, No. 2
(including ACG8, ACG9, Games in AI Research, ACG10 t/m p. 18)
Version: 20 June 2007

1 JDB material available from the British Library and the chess collections at Cleveland, The Hague and Melbourne.

BGBLITZ, http://www.bgblitz.com

Ellis Horwood, Chichester. ISBN 0-7458-0778-X.

pp. 179-188.

Thirteenth National Conference on Artificial Intelligence (AAAI-96), pp. 120–125, Portland, Oregon.

Cash, M. and Miller, G. (2002). Checkers Solutions Bulletin Board Service, November 26. Since both MTC and PPL databases had been computed, G. Miller was offering a prize for the longest win found under the constraint that a Checker is unmoved for the duration.

Chen, Lianrong (1930). *Pao Bin endgames*.

The Computer Chess club, [www.talkchess.com](http://www.talkchess.com)

Dodgen, G. and Trice, E. (2001). Co-authors of the WORLD CHAMPIONSHIP CHECKERS (WCC) program. An earlier, weaker version of the program (CHECKERS EXPERIMENTAL) was rated sixth in the world in 1992 (Schaeffer, 1997, p. 250), behind Dr. Marion Tinsley at number one, and the CHINOOK program at number two. See for more information about the current version of the program: http://www.WorldChampionshipCheckers.com.

Edwards, S.J. (1994). Endgame Databases of Optimal Play to Mate. At publication time, this was to be found on the World Wide Web with ftp://chess.onenet.net/pub/chess/TB/ ... KPK.tbs/tbb/tbw

Eendebak, H (2003). Personal communication. Mr. Eendebak is editor of Puzzelsport.

Gilbert, E. (2002). *KINGSROW checkers programmer*. KINGSROW is currently ranked as the second strongest program in the world by virtue of placing second at the World Computer Checkers Championship held in Las Vegas, August 3-9, 2002.

GNU-BACKGAMMON, http://www.gnubg.org

Psychonomic Bulletin and Review, 2, 159-163.

2 Pages apparently reconstructed by his friends in his memory following his untimely death.

Gurvitch, A. (1952). Published study: 1st Prize, Dagestan Committee Fizkultura i Sport (see Diagram 8).
